Job Opportunity
Mobile App Developer

We are looking for a recent graduate who is interested to contribute to our ongoing app development projects as a full-time employee. The assigned tasks can include development of mobile applications for iOS and/or Android platforms, as well as PC software development for the Giatec devices and sensors. We are currently working on very interesting mobile applications (in which the candidate will be involved) for smart structures, IoT in construction and corrosion detection in concrete structures as well as real-time wireless sensing of concrete properties.

Excellent communication skills are required. Knowledge of Java and Java Script is essential, and familiarity with HTML5, UI/UX and using softwares for web-designing and CAD tools is an asset. All the qualified candidate who would fit either of the categories are encouraged to apply for this position.

Giatec Scientific Inc. is a knowledge-based company that brings smart solutions and technologies to the construction industry. We particularly manufacture novel electronic devices and sensors for applications such as the quality control of concrete and condition assessment of reinforced concrete structures. Giatec offers a dynamic environment for motivated team-players to be involved in a wide range of activities.
