List of Figures	xvii
List of Tables	xxv
PART I: Background	1
1. INTRODUCTION	3
1.1 Why Parallel Processing?	3
1.2 Parallel Architectures	4
1.2.1 SIMD Systems	5
1.2.2 MIMD Systems	6
1.3 Job Scheduling	8
1.4 Software Architectures	10
1.5 Overview of the Monograph	11
2. PARALLEL AND CLUSTER SYSTEMS	13
2.1 Introduction	13
2.2 Parallel Architectures	15
2.2.1 UMA Systems	15
2.2.2 NUMA Systems	16
2.2.3 Distributed-Memory Systems	16
2.2.4 Distributed Shared Memory	18
2.3 Example Parallel Systems	19
2.3.1 IBM SP2 System	19
2.3.2 Stanford DASH System	21
2.3.3 ASCI Systems	22
2.4 Interconnection Networks	24
2.4.1 Dynamic Interconnection Networks	26
2.4.2 Static Interconnection Networks	29

2.5	Interprocess Communication	36
2.5.1	PVM	36
2.5.2	MPI	40
2.5.3	TreadMarks	43
2.6	Cluster Systems	45
2.6.1	Beowulf	46
2.7	Summary	48
3.	PARALLEL JOB SCHEDULING	49
3.1	Introduction	49
3.2	Parallel Program Structures	51
3.2.1	Fork-and-Join Programs	51
3.2.2	Divide-and-Conquer Programs	52
3.2.3	Matrix Factorization Programs	53
3.3	Task Queue Organizations	55
3.3.1	Basic Task Queue Organizations	55
3.3.1.1	Improving Centralized Organization	57
3.3.1.2	Improving Distributed Organization	59
3.4	Scheduling Policies	63
3.4.1	Space-Sharing Policies	63
3.4.1.1	Static Policies	63
3.4.1.2	Dynamic Policies	64
3.4.2	An Example Space-Sharing Policy	65
3.4.2.1	Adaptive Space-Sharing Policy	66
3.4.2.2	A Modification	67
3.4.2.3	An Improvement	67
3.4.2.4	Performance Comparison	68
3.4.2.5	Performance Comparison	69
3.4.2.6	Handling Heterogeneity	75
3.4.3	Time-Sharing Policies	78
3.4.4	Hybrid Policies	80
3.5	Example Policies	81
3.5.1	IBM SP2	81
3.5.2	ASCI Blue-Pacific	82
3.5.3	Portable Batch System	83
3.6	Summary	84
PART II: Hierarchical Task Queue Organization		85

<i>Contents</i>	xiii
4. HIERARCHICAL TASK QUEUE ORGANIZATION	87
4.1 Motivation	87
4.2 Hierarchical Organization	89
4.3 Workload and System Models	93
4.4 Performance Analysis	96
4.4.1 Queue Access Overhead	96
4.4.2 Utilization Analysis	97
4.4.2.1 Centralized Organization	98
4.4.2.2 Distributed Organization	98
4.4.2.3 Hierarchical Organization	99
4.4.3 Contention Analysis	99
4.4.3.1 Centralized Organization	99
4.4.3.2 Distributed Organization	100
4.4.3.3 Hierarchical Organization	100
4.4.5 Performance Comparison	101
4.4.5.1 Impact of Access Contention	102
4.4.5.2 Effect of Number of Tasks	104
4.4.5.3 Sensitivity to Service Time Variance	107
4.4.5.4 Impact of System Size	109
4.4.5.5 Influence of Branching and Transfer Factors	111
4.4.6 Performance of Dynamic Task Removal Policies	114
4.4.7 Summary	117
5. PERFORMANCE OF SCHEDULING POLICIES	121
5.1 Introduction	121
5.2 Performance of Job Scheduling Policies	122
5.2.1 Policies	122
5.2.2 Results	123
5.2.2.1 Performance Sensitivity to System Load	123
5.2.2.2 Sensitivity to Task Service Time Variance	124
5.2.2.3 Sensitivity to Variance in Task Distribution	125
5.3 Performance of Task Scheduling Policies	126
5.3.1 Task Scheduling Policies	126
5.3.2 Results and Discussion	131
5.3.2.1 Principal Comparison	132
5.3.2.2 Impact of Variance in Task Service Time	133
5.3.2.3 Impact of Variance in Task Distribution	134
5.3.2.4 Effect of Window Size	135

5.3.2.5 Sensitivity to Other Parameters	137
5.4 Conclusions	138
6. PERFORMANCE WITH SYNCHRONIZATION WORKLOADS	
6.1 Introduction	141
6.2 Related Work	142
6.3 System and Workload Models	145
6.4 Spinning and Blocking Policies	147
6.4.1 Spinning Policy	147
6.4.2 Blocking Policies	148
6.5 Lock Accessing Workload Results	148
6.5.1 Workload Model	149
6.5.2 Simulation Results	149
6.5.2.1 Principal Comparison	150
6.5.2.2 Sensitivity to Service Time Variance	153
6.5.2.3 Impact of Granularity	154
6.5.2.4 Impact of Queue Access Time	155
6.6 Barrier Synchronization Workload Results	156
6.6.1 Workload Model	156
6.6.2 Simulation Results	157
6.6.2.1 Impact of System Load	157
6.6.2.2 Sensitivity to Service Time Variance	160
6.6.2.3 Impact of Granularity	160
6.6.2.4 Impact of Queue Access Time	161
6.7 Cache Effects	162
6.8 Summary	163
PART III: Hierarchical Scheduling Policies	165
7. SCHEDULING IN SHARED-MEMORY MULTIPROCESSORS	
7.1 Introduction	167
7.2 Space-Sharing and Time-Sharing Policies	168
7.2.1 Equipartitioning	168
7.2.2 Modified RRJob	170
7.3 Hierarchical Scheduling Policy	170
7.4 Performance Evaluation	174
7.4.1 System and Workload Models	174

<i>Contents</i>	xv
7.4.1.1 System Model	174
7.4.1.2 Workload Model	174
7.4.2 Performance Analysis	176
7.4.2.1 Effect of Scheduling Overhead	178
7.4.2.2 Impact of Variance in Service Demand	181
7.4.2.3 Effect of Task Granularity	183
7.4.2.4 Effect of the ERF Factor	184
7.4.2.5 Effect of Quantum Size	186
7.4.2.6 Sensitivity to Other Parameters	186
7.5 Performance with Lock Accessing Workload	187
7.5.1 Lock Accessing Workload	187
7.5.2 Results	188
7.6 Conclusions	190
8. SCHEDULING IN DISTRIBUTED-MEMORY MULTICOMPUTERS	193
8.1 Introduction	193
8.2 Hierarchical Scheduling Policy	195
8.3 Scheduling Policies for Performance Comparison	200
8.3.1 Space Partitioning	200
8.3.2 Time-Sharing Policy	200
8.4 Workload Model	201
8.5 Performance Comparison	203
8.5.1 Performance with Ideal Workload	203
8.5.2 Performance with Non-Uniform Workload	204
8.5.2.1 Performance with 50–50 distribution	205
8.5.2.2 Sensitivity to variance in job service demand	206
8.5.2.3 Performance under 50–25 distribution	208
8.5.2.4 Performance under 50–75 distribution	209
8.5.3 Discussion	210
8.6 Conclusions	211
9. SCHEDULING IN CLUSTER SYSTEMS	213
9.1 Introduction	213
9.2 Hierarchical Scheduling Policy	215
9.2.1 Job Placement Policy	216
9.2.2 Dynamic Load Balancing Algorithm	218
9.3 Space-Sharing and Time-Sharing Policies	220
9.3.1 Space-Sharing Policy	221

9.3.2	Time-Sharing Policy	221
9.4	Performance Comparison	222
9.4.1	Workload Model	224
9.4.2	Ideal Workload Results	224
9.4.3	Non-Uniform Workload Results	227
9.5	Summary	229
PART IV: Epilog		231
10.	CONCLUSIONS	233
10.1	Summary	233
10.2	Concluding Remarks	236
